EXPERIENCE

Deloitte, Analyst07/2024 – Present

AI Analyst with hands-on experience building and deploying AI-powered applications on SAP Business Technology Platform (BTP). Currently pursuing an M.Tech  in Artificial Intelligence, with strong practical expertise in developing Generative AI solutions such as RAG-based document Q&A systems using LangChain and Ollama. Passionate about leveraging Large Language Models to create intelligent, business-ready solutions and seeking Generative AI roles where I can apply my platform experience and AI skills to drive real enterprise impact.

PROJECTS

RAG Chatbot - Local Document Intelligence System  , Chat intelligently with your PDF and DOCX documents using local AI
Built a production-style Retrieval-Augmented Generation (RAG) pipeline enabling natural language querying over PDF and DOCX documents with fully local execution.

- Designed and implemented an end-to-end RAG system using **LangChain** and **Ollama**, allowing users to upload documents and receive accurate, context-grounded answers via a **Streamlit** interface.
- Engineered a robust document processing pipeline using RecursiveCharacterTextSplitter for semantic chunking, followed by embedding generation with nomic-embed-text and storage in a persistent Chroma vector database.
- Integrated **deepseek-r1:8b** as the local LLM to generate responses, ensuring complete data privacy with **zero external API dependency**.
- Optimized retrieval quality by implementing semantic similarity search and context-aware prompting, enabling reliable performance across diverse document types without fine-tuning.
- **Tech Stack:** Python, LangChain, Ollama, ChromaDB, Streamlit, RecursiveCharacterTextSplitter, nomic-embed-text.

MEDCAL INSURANCE COST PREDICTION  , Guessing someone's medical bills based on their health and habits (like their age, BMI)
This medical insurance project uses a **Random Forest** model to predict healthcare charges based on demographics and habits. The pipeline includes rigorous data quality checks for missing values, duplicates, and skewness within **insurance** dataset from **Kaggle**. It utilizes OneHotEncoder and StandardScaler to preprocess features before optimizing the model via GridSearchCV. The final implementation in **medical_insurance_cost_prediction** provides a functional interface for real-time cost estimation

Tech Stack used: Python, Pandas & NumPy (for handling data), Matplotlib & Seaborn (for charts), and Scikit-Learn (using Random Forest and GridSearchCV to make the predictions).

SKILLS

Programming Language: Python | **Tools:** PyCharm, VS Code, Google Colab, Jupyter Notebook | **Libraries:** Langchain, LangGraph, Numpy, Pandas, Matplotlib, Seaborn, Scikit-learn

EDUCATION

PGD and MTECH in Airtifical Intelligence, Indian Institute of Technology Jodhpur01/2025 – Present

-Concentration: AI

B TECH, KPR Institute of Engineering and Technology Coimbatore05/2024
- Concentrations: Intelligence and Modeling/Simulations (GPA: 8.45/10)Coimbatore

CERTIFICATIONS & LICENSES

AWS Certified Solution Architiect associate 

AWARDS & ACHIEVEMENT

Crown of Excellence  , Deloitte
Rewarded for outstanding performance and innovation.

Kaggle 
Secured a Top 5 position in the Kaggle Open-Source Competition by building an Earthquake Intensity Prediction Model, optimized using MSE and R² score for best performance.
